

ePAN[®] Bread Pan Designs

The ePAN[®] designs from American Pan are the strongest, lightest, most energy-efficient bread pans available in the world. With seamless construction from high-tensile strength aluminized steel and multiple strapping options, your bakery will not find a more durable, value-added pan.

Energy Efficient

ePANs heat and cool faster, reducing oven energy costs while improving proofer temperature control and decreasing the amount of space needed for pan cooling.

Easier on Your Bakery

ePANs remove thousands of pounds from an average bakery cycle and reduce wear on conveyors, stackers, and other pan handling equipment.

Extend Pan Life

The use of high-tensile strength aluminized steel creates a stronger pan and reduces the potential for pan damage.

Environmentally Sensible

The unique ePAN design requires less raw materials, resulting in less resource consumption.

Ergonomically Sound

The lighter weight ePAN—weighing up to 30% less depending on overall size and features—makes pan handling more manageable for employees.

BUNDY BAKING SOLUTIONS:

-  Baking Pans
-  Pan Coatings & Refurbishment
-  Equipment & Services

Ultimate Coatings

American Pan can supply ePANs with our proprietary AMERICOAT[®] or DuraShield[®] coatings to deliver hundreds, even thousands, of trouble-free releases.

ePAN Strap Design Options

- Lighter weight, high-strength strapping and bumpers
- Unique designs for specific production needs
- Stackable designs available

30% lighter than traditional designs of same size and specifications
